# Automobile Sales Dashboard Analysis

Prepared by: Sourabh Kulkarni

June 27, 2026

# Agenda

# Why this analysis matters

Dashboard evidence for sales, mix, and management action

## Business decision frame

This dashboard analysis shows where growth is concentrated, which brands and vehicle types create value, and how country mix affects performance. It also shows sales at 32M versus the 50M target.

01

### What do customers prefer?

Use brand, vehicle type, and country views to identify the combinations that attract demand and guide future sales focus.

02

### Where should inventory move?

Read product and market patterns to align stock with stronger makes, vehicle types, and geographies rather than broad averages.

03

### Which gap needs action first?

Assess why 32M actual sales trail the 50M target and where management action is most urgent based on dashboard evidence.

# Requirements and evaluation traceability

How the deck maps guideline requirements, dashboard evidence, and academic assessment

| | | |
|---|---|---|
| 1 | **Guideline coverage** | Covers introduction, methodology, analysis, insights, conclusions, and recommendations. |
| 2 | **Dashboard evidence** | Addresses sales trends, customer signals, inventory, and strategy. |
| 3 | **Academic rigor** | Includes DAX, data transformation, and visualization documentation beyond description. |

# Dataset and business scope

What the source data covers, which entities it tracks, and where evidence is bounded

## 01

### Available data

Key fields include InvoiceDate, Make, CountryName, SalePrice, CostPrice, ClientName, Model, ReportingYear, ReportingMonth, and VehicleType.

## 02

### Markets and makes

Markets: United Kingdom, USA, France, Switzerland, Spain, and Germany. Makes: Aston Martin, Rolls Royce, Jaguar, Bentley, MGB, Triumph, and TVR.

## 03

### Business dimensions and limits

Vehicle types covered are Coupe, Saloon, and Convertible. Unsupported or unspecified values should not be inferred.

# Methodology, DAX coverage, and data preparation

A five-step workflow with specific DAX measures and data transformations

## Five-step analytical workflow

**Review requirements**
Map required outputs, DAX scope, and transformation tasks.

**Prepare data**
Filter Jaguar, split dates, merge, pivot color.

**Build DAX measures**
Build YTD, LTM, moving average, rank, margin, variance.

**Interpret visuals**
Read year, region, product, and peak-month results.

**Form recommendations**
Turn evidence into dashboard-led business actions.

## Context and completeness

- DAX spans yearly, YTD, and date-range sales
- Includes cumulative, growth, and LTM measures
- Covers rank, margin, variance, and moving average
- Tracks top products, regions, and best sales month
- Documents each transformation for reproducibility

## Requirement areas addressed

- Total sales by year and date range
- Cumulative, YTD, growth, and last 12 months
- Highest month, top products, and sales rank
- Sales per region and 3 month moving average
- Variance vs budget and profit margin

## Value delivered

- Filters Jaguar records and removes duplicates
- Replaces vehicle types and builds total cost
- Splits invoice date; groups make and country
- Merges, sorts, and pivots color fields

# Dashboard overview and narrative

How the dashboard pages are turned into a coherent business narrative

## Narrative path

### Start with headline performance

Open with KPI context, including the gap between 32M actual sales and the 50M target, before moving into detail.

### Move through trend and mix

Use year, month, make, vehicle type, and country visuals to explain where performance rises, concentrates, or weakens.

### End with strategic action

Synthesize cross-visual evidence into inventory, market, and sales strategy recommendations while flagging unsupported values.

### Dashboard visual base

Dashboard screenshot shows sales, profit, margin, a Make filter, and charts by make, country, and year.

# KPI scorecard

Executive scorecard versus 50M sales target

| | |
|---|---|
| **32M** | Total Sales |
| **11M** | Profit |
| **35.61%** | Profit Margin |
| **2.64M** | Avg. Sales per Month |
| **1.02M** | Avg. Sales per Customer |
| **31** | Distinct Customers |

*Sales reached 32M versus the 50M target. Margin is strong at 35.61%, but demand is concentrated. Growth should focus on the most profitable makes, vehicle types, and markets.*

# Executive summary

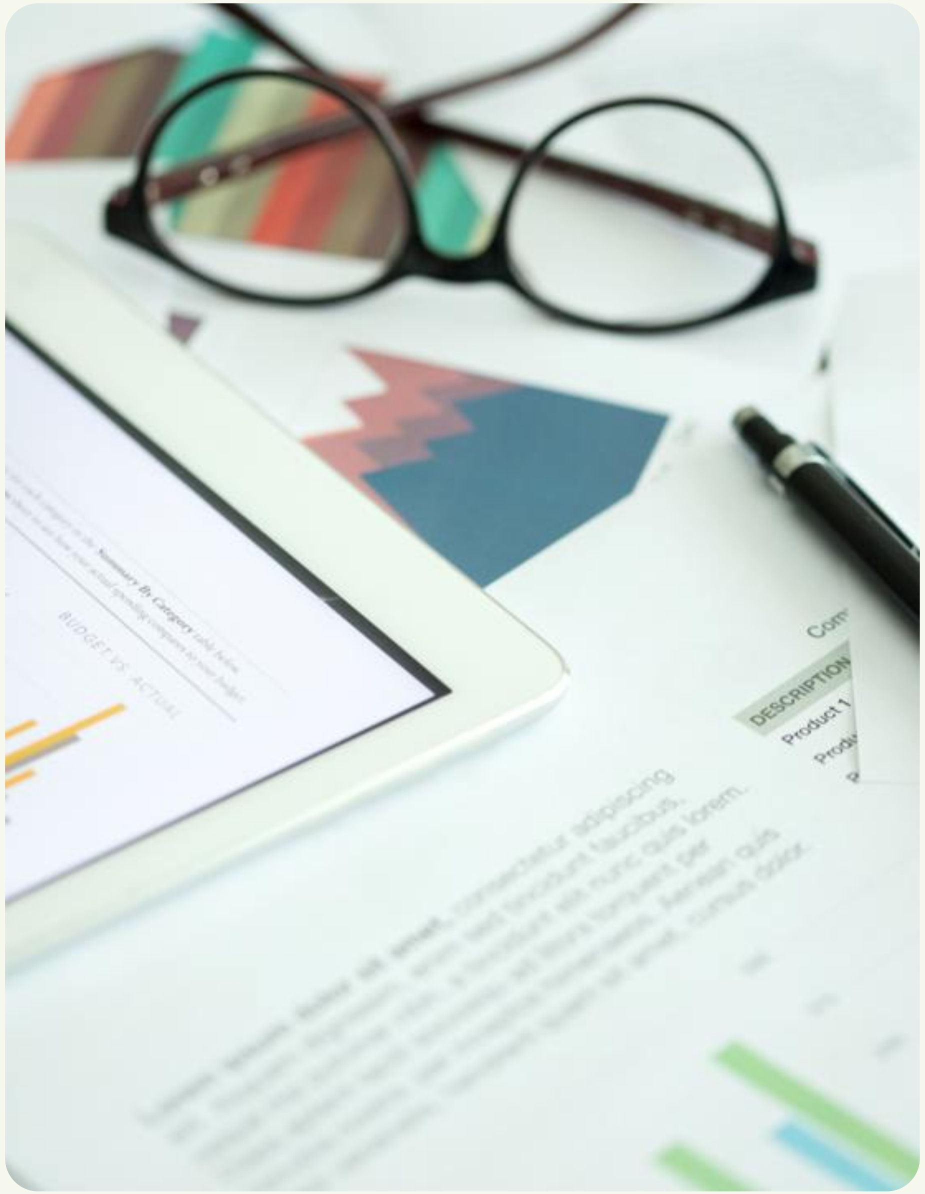
What the headline findings mean

## Core message

32M sales and a 35.61% margin are solid, but the business remains below its 50M target. The UK and USA lead demand, Coupe and Saloon dominate, and Aston Martin leads.

## Key takeaways

- → 32M sales trail the 50M target by 18M
- → UK and USA drive most demand
- → Aston Martin, Coupe, and Saloon lead sales



# Sales trajectory by year

Annual sales jumped, fell back, then recovered, pointing to uneven momentum

**Scale rose, but unevenly**

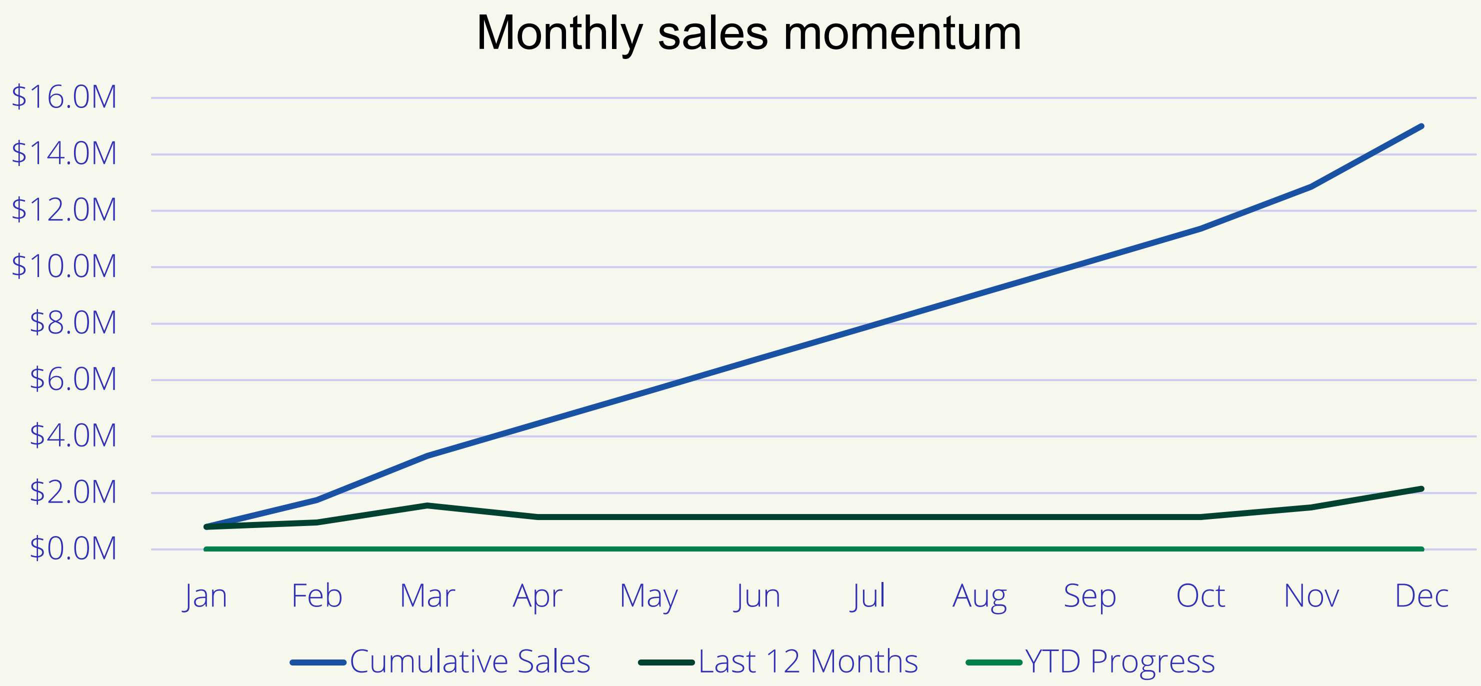
Sales rose from $3.2M to $15.0M in 2013, then dropped to $6.4M before recovering to $7.2M. This pattern suggests caution when using peak years to plan ahead.

**Growth was volatile**

Growth hit 134% in 2013, fell to -11% in 2014, then recovered to 25% in 2015. Momentum exists, but it is too uneven to treat as steady compounding.

# Monthly momentum and cumulative progress

| YTD sales | Peak month | Target | Actual sales |
|---|---|---|---|
| **$15.0M** | **$1.56M** | **$50.0M** | **$32.0M** |
| Current year total | March led last 12 months | Needed run rate remains high | Below target baseline |

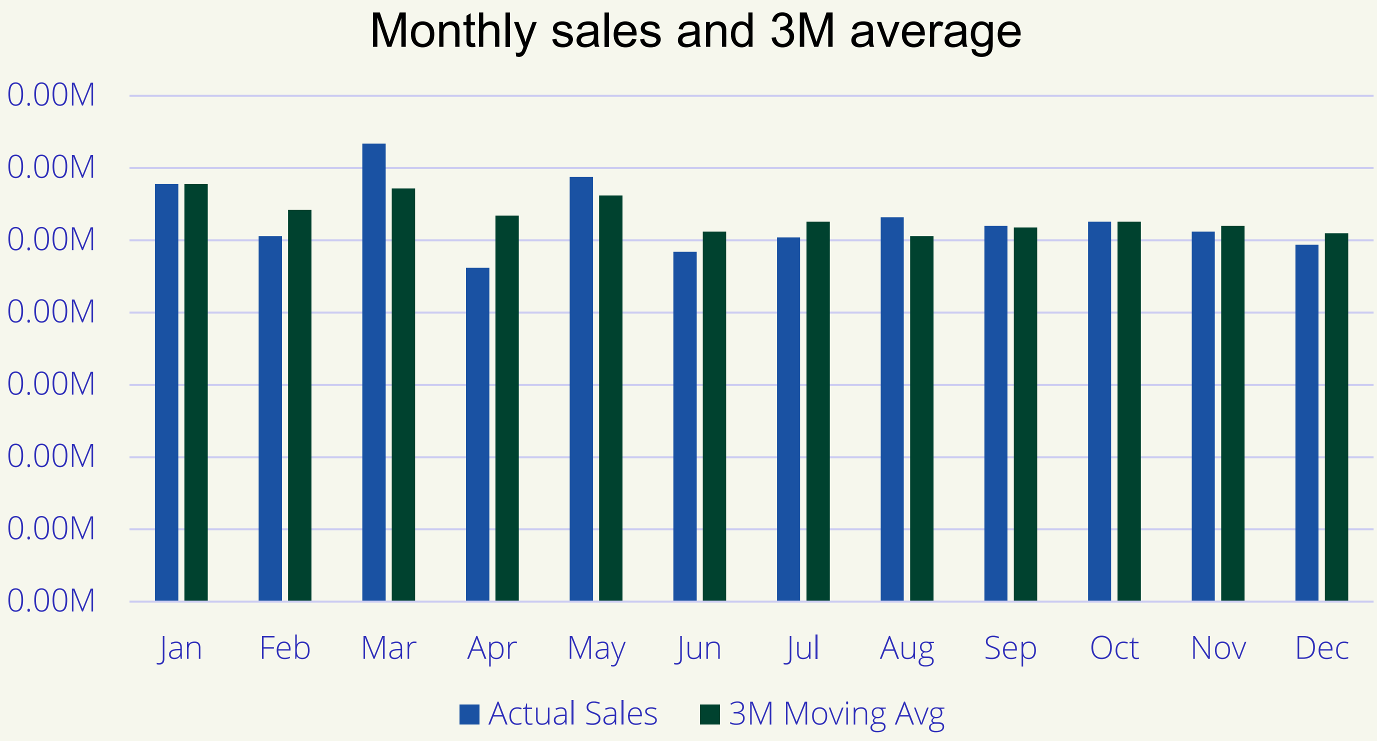


## Implications

- A few strong months drive a large share of annual results
- Peak periods should be studied for repeatable demand drivers
- Cumulative gains can mask softer recent momentum
- Planning needs buffers for uneven monthly conversion

# Stability, variance, date control

Use monthly trends, smoothing, and date filters to diagnose volatility



Monthly sales and a 3 month moving average help separate normal fluctuation from sustained weakness. Variance should be reviewed within the selected invoice-date range to identify unstable periods, while the $32M versus $50M gap remains overall business context rather than a per-year target line.

### Key findings

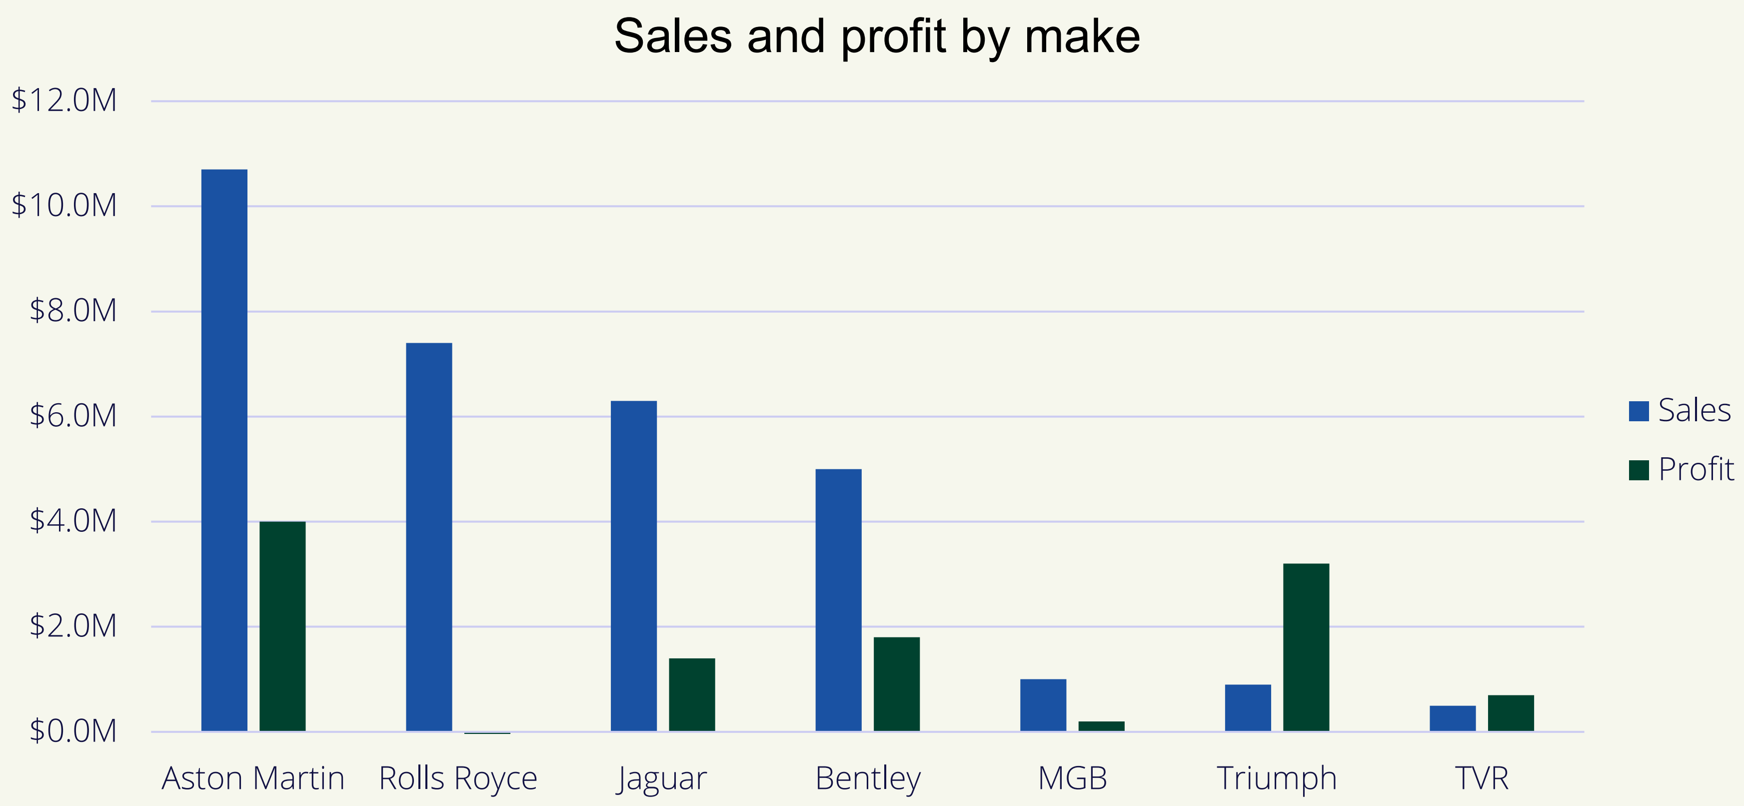
- Monthly sales reveal volatility patterns
- Moving average highlights underlying stability
- Variance should be read by period
- Date filters isolate weak windows
- $18M gap is overall context

### Next steps

- Monitor monthly variance by range
- Use filters to test weak periods
- Compare actuals to moving average
- Act on persistent variance early

# Which brands create value

Sales leaders and profit leaders do not fully align across the portfolio.



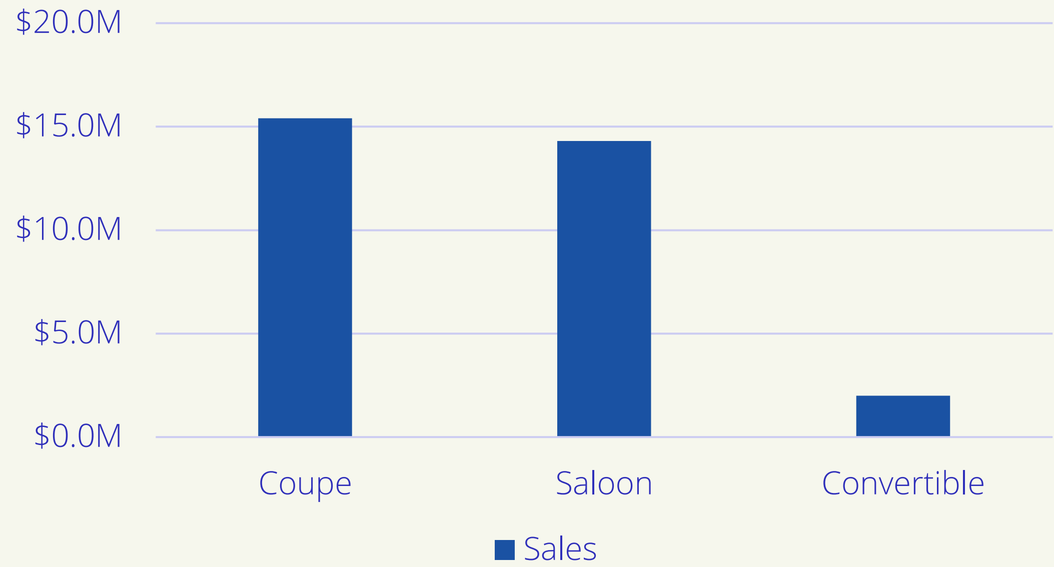
**Scale is not enough**

Aston Martin leads on both sales and profit, but the rest of the portfolio splits into distinct value tiers. Rolls Royce ranks second in sales at 7.4M yet slips to a small loss, while Triumph and TVR convert lower sales into comparatively strong profit. Management should judge makes on both scale and profit quality.

# Vehicle mix concentration

Coupe and Saloon dominate the portfolio, leaving limited diversification beyond core body types.

### Sales by vehicle type



### Highlights

**Two-type dependence**
Coupe and Saloon deliver 93.76% combined.

**Narrow tail**
Convertible contributes only 6.24%.

### KPIs

Largest segment
**48.68%**

Second segment
**45.08%**

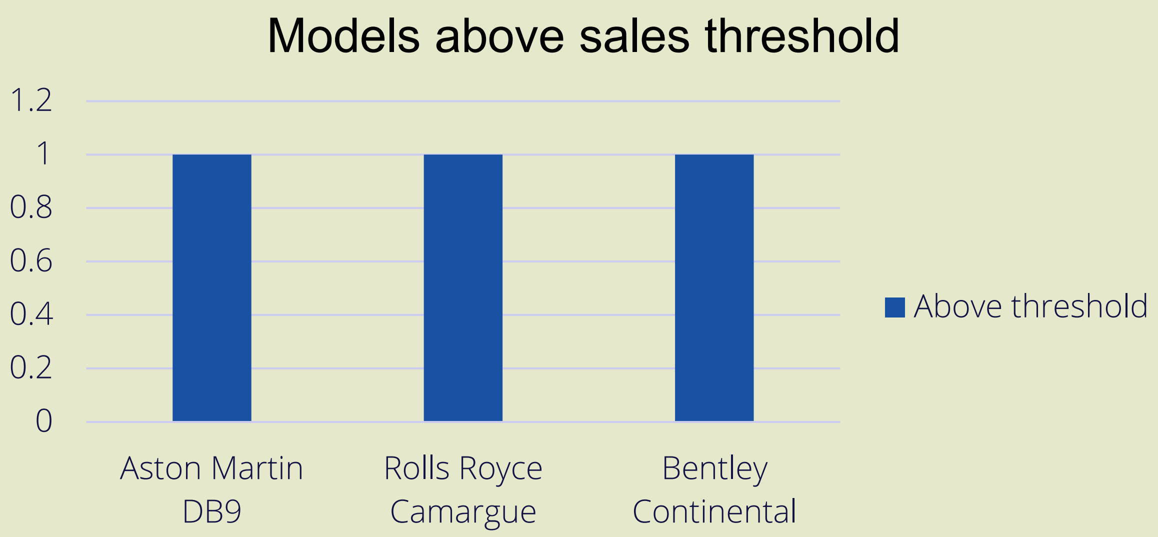
Minor segment
**6.24%**

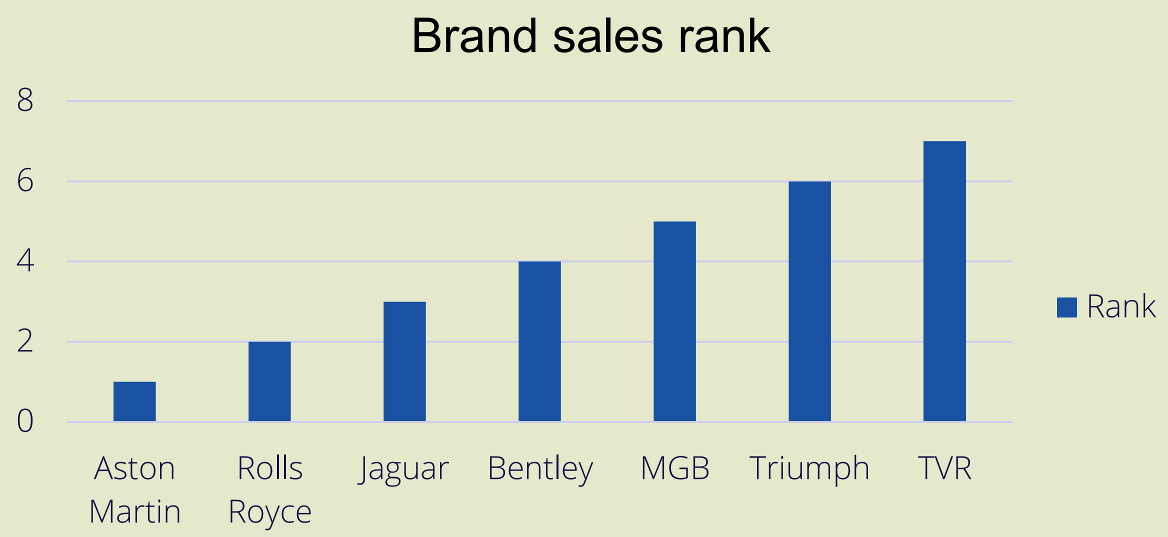
### Focus areas

1. **Protect core mix** — Back Coupe and Saloon
2. **Watch concentration** — Manage demand shifts
3. **Target niche upside** — Test Convertible growth
4. **Align inventory** — Stock to mix reality

# Top products, threshold sales, and brand rank

Premium model concentration supports leading brands, with rankings reinforcing where value is most concentrated.





**Premium models drive outsized value**

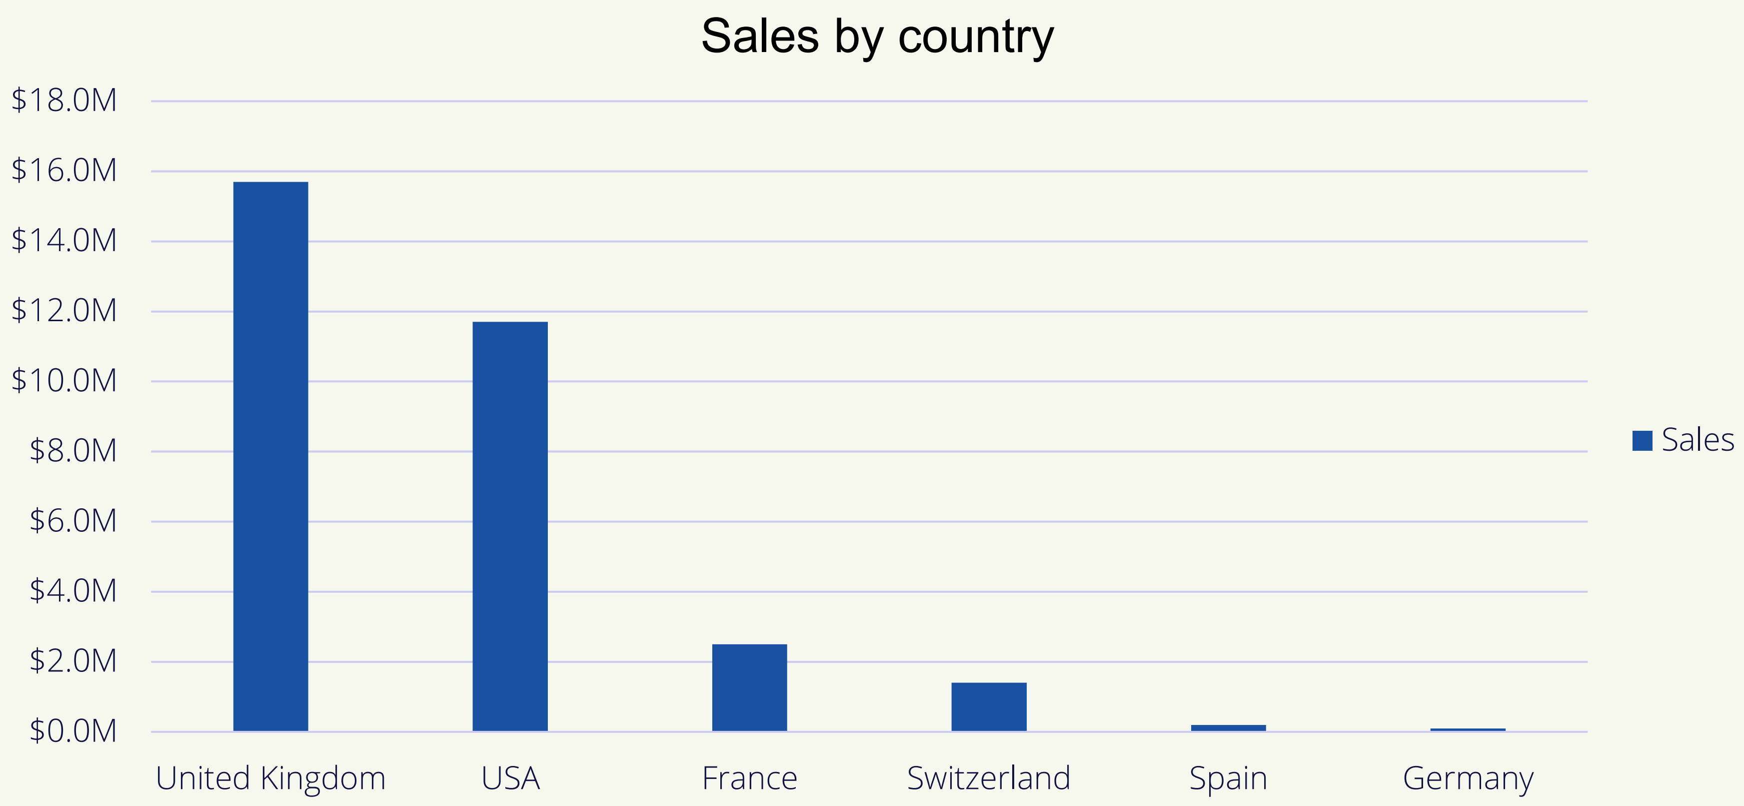
Aston Martin DB9, Rolls Royce Camargue, and Bentley Continental lead. Availability and assortment discipline matter.

**Brand rank follows the premium leaders**

Aston Martin leads this brand ranking, followed by Rolls Royce, Jaguar, Bentley, MGB, Triumph, and TVR. Read rank with profit quality.

# Market concentration by country

UK and USA dominate revenue, with limited scale elsewhere and clear diversification risk.



**High market concentration**

The UK leads at 15.7M, or 49.61% of sales. The USA contributes 11.7M, or 36.77%. France, Switzerland, and Spain are materially smaller, while Germany is very small by sales value; its contribution percentage is unspecified in the extracted source. This concentration supports focus, but it also raises dependence risk and makes diversification a priority.

# Make-country portfolio mapping

Use the matrix visually to assess where brand performance is broad versus concentrated.

## Where sales are concentrated

- UK and USA drive market scale
- Country sales are largest there
- Other markets are much smaller

Geographic concentration guides priorities

01

## How the matrix informs strategy

- Check clearly visible intersections only
- Do not infer missing cell values
- Use visual patterns for traction

Reference exact cells only when explicit

02

# Customer intensity and commercial interpretation

A small customer base supports high-value sales and strong margin performance.

**1.02M**

### Avg sales per customer

High value per relationship.

**31**

### Distinct customers

Small base, concentrated accounts.

**32M**

### Total sales

Meaningful revenue from few accounts.

**35.61%**

### Profit margin

Premium economics are evident.

## Commercial interpretation

### Premium, relationship-driven model

The combination of 1.02M average sales per customer, 31 customers, and 32M total sales indicates a premium model built on a limited set of high-value relationships rather than broad volume distribution.

01

### Manage concentration while retaining value

The commercial priority is to retain key accounts, manage concentration risk, and expand selectively into similar high-value segments that can preserve margin quality and relationship economics.

02

# Integrated insights across the dashboard

Three management insights and the strategic implication from the full performance view

## Geography leads

Revenue is concentrated in the UK and USA, leaving performance dependent on a narrow geographic base rather than broad international reach.

## Premiums lift value

A small set of makes and higher end models capture outsized value, showing that mix quality matters as much as volume in profit delivery.

## Core segments lead

Coupes and Saloons dominate the mix, giving the business a strong core but concentrating exposure in a few segments.

!

## Bottom line implication

The business is profitable and strong, but growth is uneven across markets, brands and segments. The next phase should scale the strongest combinations with discipline.

# Strategic recommendations

Six evidence-led management actions to protect revenue, improve profit discipline, and strengthen execution

## Protect core markets

- Defend the UK and USA, where sales are strongest.
- Prioritize budget and stock for both markets. Review market KPIs monthly.

## Lift profit conversion

- Tighten margin discipline for weak-profit makes, especially Rolls Royce.
- Track profit by make weekly. Escalate low-margin deals for review.

## Rebalance body style mix

- Prioritize Coupe and Saloon availability over Convertibles.
- Shift ordering toward stronger styles. Test reduced Convertible inventory.

## Use winners to sell smarter

- Use top-ranked makes and models to focus campaigns on proven demand patterns.
- Build campaigns around best sellers. Replicate offers across similar segments.

## Manage against target

- Strengthen control against the 50M sales target.
- Assign KPI owners by market. Run monthly target variance reviews.

## Grow account value

- Build customer-account strategies around high average sales per customer.
- Target high-value accounts for retention. Expand cross-sell and upsell plans.

# Strategic action plan

A four-phase roadmap that converts dashboard evidence into accountable, measurable commercial action

| | Phase 1: Validate | Phase 2: Prioritize | Phase 3: Execute | Phase 4: Review |
|---|---|---|---|---|
| **Timeline** | Weeks 1-2 | Weeks 3-5 | Weeks 6-10 | Weeks 11-12 |
| **Key activities** | • Validate dashboard data<br>• Confirm KPI definitions<br>• Assign metric owners | • Rank markets by value<br>• Prioritize key body styles<br>• Flag weak-profit makes | • Launch targeted campaigns<br>• Adjust stock allocation<br>• Enforce margin reviews | • Review KPI movement<br>• Refresh dashboard insights<br>• Reset next actions |
| **Key deliverables** | • KPI ownership map<br>• Validated metric pack<br>• Baseline review cadence | • Market priority matrix<br>• Product focus decisions<br>• Margin risk watchlist | • Campaign action tracker<br>• Revised stock plan<br>• Margin control log | • Performance review pack<br>• Updated dashboard rules<br>• Next-quarter action plan |
| **Success milestone** | All KPIs owned and baselined | Clear product-market priorities set | Target tracking and margin control active | Monthly dashboard reviews embedded |

**Governance and review actions to sustain evidence-based commercial decisions**

→ Monthly KPI owner reviews

→ Market and model accountability

→ Margin monitoring by make

→ Quarterly decision refresh

# Limitations and weak evidence

What the dashboard shows, and what it does not fully prove

## What remains unsupported

Some evidence is incomplete or unclear. Exact labels for a few year-growth values need screenshot verification. Some make-country and margin details are only partly legible. The source also does not prove refresh reliability or drill-down quality.

## What we should not claim

Avoid precision where the source is not visible. Do not infer Germany's contribution share beyond what the dashboard shows. Do not present undocumented DAX logic, data quality, or interactivity performance as confirmed facts.

## How to handle these limits

1

### Verify visible labels

Check exact figures and chart labels directly against the final dashboard screenshots before submission.

2

### Separate facts from gaps

Keep grounded findings explicit, and mark unknowns as limitations rather than filling them with assumptions.

3

### Use cautious wording

Frame conclusions around supported patterns, not unsupported precision or undocumented functionality.

# Future improvements to the dashboard

Enhancements that strengthen analysis quality, traceability, and evaluator confidence

## Benchmark clarity

Show budget, target, and variance definitions more clearly. This would make underperformance versus the 50M sales target easier to interpret and defend.

## DAX transparency

Document core measures, calculation logic, and assumptions. Clear measure definitions would improve academic defensibility and reduce ambiguity in profit and growth interpretation.

## Storytelling drill-down

Add stronger drill-through paths or bookmarks so evaluators can move from KPI summary to make, market, and vehicle detail without losing analytical context.

## Deeper profitability

Extend analysis to customer, model, and margin drivers. More evidence would strengthen commentary on less legible visuals.

# Requirement coverage recap

1 **Business context and purpose**

The deck established the automobile sales context, business goals, and why dashboard analysis matters for sales strategy, customer insight, and performance improvement.

2 **Method and transformations**

The presentation covered methodology, data preparation, and calculation logic, including transformations and DAX-style measures used to analyze sales, profit, targets, growth, and customer metrics.

3 **Dashboard evidence and visuals**

The deck reviewed KPI cards, trend charts, mix views, country analysis, target variance, and cross-visual synthesis. Where exact evidence was incomplete, it used transparent limitation statements instead of invented values.

4 **Insights to conclusion**

The presentation closed the loop from findings to recommendations, limitations, final conclusion, and evaluator-ready discussion of assumptions, evidence quality, and decision implications.

Key Takeaways one sentence summary

# Conclusion

A disciplined close grounded in dashboard evidence and clear management priorities

## Final takeaway

The automobile portfolio is profitable, with 32M sales, 11M profit, and a 35.61% margin. But it remains below the 50M target and concentrated in a few markets. The priority is to build on strengths while improving profit conversion and performance management.

## Immediate priorities

1

### Scale what works

Prioritize strong markets, makes, and vehicle types with proven sales traction and margin quality.

2

### Fix weak conversion

Investigate low-margin segments and close the gap between sales activity, profit delivery, and target attainment.

3

### Lead with dashboard use

Strengthen measurement, ownership, and review so insights turn into tracked commercial action.

# THANK YOU
